

SOFFIT PANELS

SOFFIT PANELS:

HB offers a complete soffit system solution including fascia board with drip edge, soffit panel, rafter tails and frieze board. These components can be used as a complete system or individually.

HB soffit panels are offered in 3 different styles

- Smooth Panel
- V-groove Panel
- Nickel Joint panel

Smooth panel is ideal for applications where a clean look with less detail is desired. HB V-groove panels emulate a traditional v-joint tongue and groove soffit, standard groove spacing is 5" o.c.. Nickel joint panels have a squared off groove with 1/8", 1/4", 3/8" and 1/2" width options, standard groove spacing is 5" o.c.

When used in conjunction with HB rafter tails, soffit panel seams are hidden and there are minimal exposed fasteners, resulting in very little prep work to ready for paint.

HB soffit panels are available with a factory applied woodgrain finish available in several different stain selections.

An alternate but popular application of HB panels is as wall cladding. V-groove and Nickel Joint panels can be placed vertically or horizontally adding detail to accent walls.

System designed to be seamless and to cover most fasteners.

SOFFIT PANELS FEATURES

- Will not split, check, crack, or rot
- Low maintenance
- Superior paint adhesion
- Installed using typical woodworking tools
- Straightforward installation process
- Reduced installation times
